The Shoes are A. C. McGrau & Co's. make, and every pair warranted. Come early, so as to get your first choice, as there is only one pair of a

kind, and they are going like hot cakes. Also a complete line of winter goods now on hand at bottom prices. Groceries always at the bottom, and when others are crying low prices

we are always just as low and generally cheaper, Try our Black Cross Tea at 50c a pound. You will use no other after you once try it.

Highest Market Price for Butter and Eggs.

\$30,000 In New Buildings and Repairs

The best town of its poulation in Michigan is Chelsea. If any one doubts this statement let him or her look over the village and see how comfortable our people are situated, what neat homes they have, with such beautiful surroundings; good schools, churches, and other evidences of a high civilization. Chelsea is the model town of Michigan.

The past summer about \$30,000 was invested in new buildings and repairs, in this village, as follows:

Middle street, East, \$7,000.

Chas. Steinbach, new double store, Mid-

dle street, West, \$2,500. Geo. E. Davis, new dwelling house,

Summitt street, East, \$1,500. Edward Vogel, new dwelling house, Plates, Bread Dishes, etc.

Congdon street, \$1,500. Dr. H. H. Avery, new dwelling house

Jefferson street, \$1,000. C. W Maroney, new work shop, \$400.

Arthur Hunter, new dwelling house, Madison street, \$850.

Chelsea Electric Light Co., addition to to power house, \$1,000.

Samuel Guerin, new dwelling house, Harrison street, \$800.

Thos. Cassidy, repairs on dwelling hous

Madison street, \$500. Geo. Wackenhut, repairs on dwelling

house, Main street, South, \$300. Jas. Cooke, repairs on dwelling house,

Main street, South, \$325. Peter Fletcher, repairs on dwelling

house, Orchard street, \$200.

Glazier Stove Co., new office building, Main street, North, \$1,500. C. J. Chandler & Co., new warehouses,

J. A. Maroney, new dwelling house,

Polk street, \$800. Frank Staffan, new brick store buildings

Main street, North, \$3,000. L. Babcock, new brick building, Main

street, North, \$2,000. E. Hooker, repairs on dwelling house, North street, \$309.

Besides the above there have been a number of smaller repair jobs, new barns,

etc., that would probably pring the to

#### How to Dress for a Photograph.

We live in an age of marked development in photography, as in all other fine arts and sciences. In photography especially is it of paramount importance to reach the best results that the person applying for a picture should remember certain rules respecting dress.

The desired results are largely in the hands of the subject, and to this end do we offer the following suggestions, says an old photographer:

"Light begets light;" therefore, in dressing for a picture, let the drapery be light." The reverse to be observed if dark effects are desired. Robes for the best effects for ladies are such as will fold or drape nicely; dress naturally, and think a little, while you are about it.

Ladies and children with light hair should dress in something lighter than those whose hair is dark or brown. We will give you a photographic reason for this. Light substances photograph more quickly than dark. Hence if a fair person wears dark dresses, either the person or the dress will be over done, and vice versa with a dark person.

Never use powder and rogue, unless you wish to behold a ghastly and unnatural appearance in your picture. Any imperfections of complexion are readily removed by the retoucher.

A bright day is not necessary. In fact, the light is best when the heavens are clouded and the sun shines through the clouds. A "light-cloudy" day is not objectionable if it is not actually dark. The only difference between the two is that on a dark day the sitting is prolonged a few seconds.

Arrangements for the babies should be made so as not to interfere with their daily sleep, as they look and feel so much better and sweeter after a nap. The morning is also best for them and a clear day, because the light works more quickly. Ayoid coming late in the day. Never come in a hurry or a flurry.

#### Rheumatic Twinges.

Fortune Teller—"You will get used to it." -Sketch

#### PROGRESS.

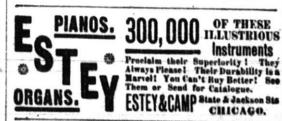

People who get the greatest degree of comfort and real enjoyment out of life, are those who make the most out of their opportunities. Quick perception and good judgment, lead such promptly to adopt and make use of those refined and improved products of modern inventive genius which best serve the

needs of their physical Accordingly, being. the most intelligent and progressive people are found to employ ie most refi perfect laxative to regrulate and tone up the stomach, liver, and bowels, when in need

of such an agent-hence the great popularity of Dr. Pierce's Pleasant Pellets. These are made from the purest, most refined and concentrated vegetable extracts, and from forty-two to forty-four are contained in each vial, which is sold at the same price as the cheaper made and more ordinary pills found in the market. In curative virtues, there is no comparison to be made between them and the ordinary pills, as any one may easily learn by sending for a free sample, (four to seven doses) of the Pellets, which will be sent on receipt of name and address on a postal card.

ONCE USED THEY ARE ALWAYS IN FAVOR. The Pellets cure biliousness, sick and bilious headache, dizziness, costiveness, or constipation, sour stomach, loss of appetite, coated tongue, indigestion, or dyspepsia, windy belchings, "heart-burn," pain and distress after eating, and kindred derangements of the liver, stomach and bowels. Put up in glass vials, therefore always fresh and reliable. One little "Pellet" is a laxative, two are mildly cathartic. As a "dinner pill," to promote digestion, take one each day after dinner. To relieve distress from over-eating, they are unequaled. They are tiny, sugar-coated granules; any child will readily take them. Accept no substitute that may be recommended to be "just as good." It may be

better for the dealer, because of paying him a better profit, but he is not the one who needs help. Address for free sample, WORLD'S DISPENSARY MEDICAL ASSO-CIATION, 663 Main Street, Buffalo, N. Y.

its Needs Set Forth in Secretary Herbert's Report.

they Include More and Better Ships and Guns-The Condition of China in the Present War Is an Object Lesson.

WASHINGTON, Nov. 29 .- The secretary of the pay in his annual report to the president recnends thatcongress be asked to authorize the construction of three battle ships of about 19,000 tons displacement each, to cost, excluare of armament, not exceeding \$4,000,000 each. and twelve torpedo boats of from 100 to 303 ons each, at the discretion of the secretary of the navy to cost not exceeding an average of 170,000 or a total expenditure for naval increase of \$14,040,000.

The naval estimates for the fiscal year ended June 30, 1896, amount to \$30,952,020, of which 13.259,392 is to make payments upon work hitherto authorized. The construction of seam machinery, armor and armament of the new vessels now approaching completion. Tais appropriation, which is to meet an indebtdness due before the end of the fiscal year. will be substantially the last, for with the expenditure of \$750,000 in 1897 the existing navy will be entirely paid for.

The secretary makes the point that not considering the effect of the cessation of this work on industrial conditions and disclaiming all obligations of the government to engage in public works for the sole purpose of giving employment to any class, from the standpoint of national defense it will be unwise to stop the work of naval upbuilding.

#### A New Policy.

The secretary announces the adoption of a ew naval policy regarding the movements of ships in commission. He has decided in the interests of economy and efficiency and for the more perfect protection of American interests abroad to put into operation a policy which will keep a number of cruising vessels sufficient for the ordinary needs of naval policing on each of the six stations. North and South Atlantic. North and South Pacific, Asiatic and European, the South Pacific being new station, now for the first time announced. This policy, it is thought, will allow frequent fleet and squadron evolutions which are necessary for the instruction of officers and men.

#### Need More Ships and Guns.

The secretary alludes to Secretary Chandler's references to the wastefulness resulting from many different yards and from the methods pursued in them. What our navy needs, says the secretary, is more ships and guns, not more navy yards. Concerning the subsidized merchant vessels, Secretary Herbert is severe on the congressional policy which annually pays such vessels as the Paris and New York on condition that they hold themselves in readiness to serve the government whenever demanded, yet providing no armament for

"When they hauled down the English to hold themselves in readiness to serve that nation, and the English government had guns and gun mounts ready to be put upon them at amoment's notice," and, continuing an allusion to the requirements of the government in the matter of a reserve of ordnance and ordnance stores, Secretary, Herbert says:

#### A Late Lesson.

The latest and one of the most impressive lessons in all history is now being taught by China and Japan. A nation, the most populous in the world, able to put millions of fighting men into the field, is now, after suffering many disasters, scouring Europe and America for munitions of war. It relied upon its numbers. Now it is buying discarded guns and discarded ammunition, whatever it can get, to aid it in repelling the assaults of a people vastly inferior to it in numbers.

#### Enlisted Force.

The recommendation of last year that the enlisted force be increased by 2.000 men is renewed. The number of vessels which must be kept in commission and ready for service is greater than the present enlisted force allowed the navy will suffice to man. Calculations place this increase at not less than 2.000 men, and the law to authorize such increase should be so worded as to permit the department to enlist them whenever needed.

An efficient and economical service cannot be carried on without a fair margin always beween the number of men absolutely necessary o man the ships in commission and the limit as fixed by law. New ships getting ready for service and the constantly recurring emergencies necessitating the dispatch of vessels o foreign waters are causing demands upon he enlisted force which it will very shortly be unable to meet. The expense of maintaining the additional number of men asked for will be small in comparison with the results to be obtained and the value of public property of which they become the care-takers and de-

#### CITIZEN BANDITS.

Alleged Scheme Whereby Wealthy Cattle-

men Defraud Express Companies. ELRENO, O. T., Nov. 29.—Twenty-five housand dollars was expressed from Kansas City to George Isaacs, a wealthy Chickasaw cattleman at Canadian, Tex., arriving at that point Saturday evening last. When the train pulled into Canadian station a gang of bandits held up the express car, opening a general fusillade on the train.

Sheriff McGee, of this county, was called in and took a hand at the shooting in protecting the express company and was shot by the robbers, being literally shot to pieces, and several thers were fatally wounded in the enagement, among them being some of he robbers, who were carried away by their pals.

It is stated that a combination has been made by wealthy cattlemen and Kansas City parties whereby money is to be shipped into the territory where the express companies are to be despoiled. The shippers will then present their claims to the express companies for settlement. A number of wealthy cattlemen of the Chickasaw Indian nation are said to be impli-

George Isaacs, a wealthy stockman living in the western part of the Chickasaw nation, has been arrested. Isaacs shipped to himself from Kansas City two packages said to contain \$25,000. They were addressed to Canadian, Tex., and were on the train attacked by the robbers, in the defense of which, his positions in the New York ball Sheriff McGee was killed. The packages were opened and found to contain has been signed to manage and captain \$200 in \$1 and \$2 bills. Two of the robbers were identified as Isaacs and a intends practicing law with a Wall friend. The former was captured.

#### THE ARMY.

Secretary Lamont Recommends the Bat-

talion Formation. WASHINGTON, Dec. 3.-Secretary of War Daniel S. Lamont in submitting his annual report to the president gives the expenditures of his department for the fiscal year ending June 30, 1894, at \$56,039,009.34. The appropriations for the fiscal year of 1895 are \$52,429,112.78. The estimates for the fiscal year ending June 30, 1896, are \$52,318,659.55.

. The reports of the officers in command of the several geographical departments corroborate the opinion, expressed in the last annual report that Indian warfare is virtually at an end in the United States, and that beyond occasional calls for police duty in the neighborhood of Indian reservations, the army will henceforth be relieved to a greater degree each year of the labor of armed surveillance over the tribes of the west.

There have been no serious infractions of the neutrality laws on the Mexican frontier during the year, but the presence of a regular force there for some time to come is clearly prescribed by the conditions of civilization in that region.

It was found necessary during the period be ginning with March and extending through July of the current year, in various sections of the country, to employ a considerable part of the army to execute the orders of the United States courts, otherwise successfully defled and resisted, to protect the dispatch of the travel and commerce, and to guard the property of the government. The movement of troops thus necessitated was the largest which

has taken place since the close of the civil war. The number of enlisted men in service on October 31 was 25,516. Deducting the sick, those in confihement, recruits not yet joined, those absent on furlough, and others employed in staff departments or on detached service, the effective field strength on the same date was 20,114 of all arms.

The report says: "I earnestly recommend that congress enact the legislation necessary to establish in the army the battalion formation, now adopted by the armies of every other civilized nation. As necessary to effect that change I recommend the removal of the limit of 25,000 men fixed by the act of June 18, 1874, and a return to the limit fixed by the act of July 15, 1870. Legislative approval of these two propositions will restore to the effective force about 4,000 enlisted men, bringing the actual strength of the army up to the nominal strength now fixed by law. By these changes the army will be increased in efficiency 20 per cent. in numbers about 16% per cent. and in cost of maintenance only about 6 per cent.

"The organization of the line of the army has undergone no material change since the close of the civil war. During this period of thirty years every large foreign army has been completely reorganized. Changes and improvements in arms and ammunition and equipments have forced upon the leading tacticians of the great armies of the world the necessity of a broad departure from the old systems. All have adopted the battalion as the tactical unit for infantry and artillery serving as infantry, and nearly all the equivalent of the squadron as the cavalry unit. The light artillery battalion has a similar composition. Should our army ever hoist the American flag," he says, "they were be brought into collision with disciplined forreceiving pay from the British government to eign troops, our present formation would prove so defective as to turn the scale against us in a conflict on terms otherwise equal.

The policy of concentrating the troops and abandoning unnecessary posts has been prosecuted throughout the year. Where practicable small garrisons remote from railroads, whose further retention has become unneccessary by a change of conditions, have been consolidated with garrisons at more important centers, thus reducing the cost of maintenance and transportation and utilizing improved facilities for the prompt dispatch of troops to any point where their services may be required. The changes have in no instance lessened the protection afforded by the army to any region in which a garrison has heretofore been stationed, but have considerably augmented the extent of territory over which that protection can promptly and effectively be

On June 30, 1893, the army was distributed among ninety-five independent posts. During the last year the number of posts was reduced to eighty, with garrisons ranging from 60 to 750 men. The aggregate area of the military deservations abandoned since the last annual report is upwards of 208,000 acres.

Army officers on duty with the national guard of the states, of whom twenty-seven were regularly assigned to state headquarters, concur in reporting steady improvement in the training and efficiency of the militia. The fact that state camps of instruction, in which forty additional army officers participated, were held by thirty-three states is proof that state military establishments are on a better footing now than ever before in time of peace. In several instances army detachments took part in state camps, and the profit to the army in acquaintance with the soldierly qualities of the militia and to the militia in observation of the attention of the regulars to details, which is necessary to the perfect soldier, is both a present benefit and an investment for the future from which we should reap returns in any emergency calling for the cooperation of the two forces. The strength of the militia shows an increase of about 5,000 since last year, the latest returns showing a total organized force of 117.533 officers and enlisted men. The artillery arm, maintained by thirty-three states, has an enrollment of 5,922 officers and men: the cavalry arm, maintained by twenty-six states, of 5,069.

#### BOND BID ACCEPTED.

Secretary Carlisle Takes Up the Offer of the Stewart Syndicate.

WASHINGTON, Nov. 27.-Secretary Carlisle Monday accepted the Stewart syndicate offer for the \$50,000,000 bond loan at their bid of 117.077 per \$100, all or none. The Stewart syndicate in their bid direct that \$40,000,000 of the bonds are to be delivered in New York; \$3,000,000 in Boston; \$3,009,000 in Philadelphia, \$2,000,000 in Cnicago and \$2,000,000 in San Francisco. The bonds will be ready for their delivery as soon as the syndicate pay their first installment and indicate the amount and denomination of registered and coupon bonds they desire.

Secretary Carlisle was informed late in the afternoon that the Stewart syndicate, to whom the entire \$50,000,000 new bond loan was awarded, had paid into the subtreasury at New York, Monday, on account of the first installment, \$8,000,000 in gold. Assistant Secretary Curtis said that \$5,000,000 of the new bonds were all ready to be delivered and the balance of \$45,000,000 would be ready for delivery after December 3 next.

#### FAVORS A CHANGE.

Comptroller Eckles Suggests a New System of Currency.

His Plan for Improving the Present National Bank-Note Issue-Interesting Facts Extracted from His Annual Report.

WASHINGTON, Dec. 3.-Suggestions have been received, says Comptroller of the Currency Eckels in his report, from many eminent financial sources that the whole question of a banking and currency system ought to be referred by congress, to a commission to be created by law, appointed by the president, and

clothed with proper authority. "A commission non-partisan in its character," he says, "composed of men of eminent abilities, could unquestionably devise a currency system sound in every particular, and one which would commend itself to every interest of the country. It could largely take the question out of politics, and have it considered simply in its business aspects and upon merit alone: but if the present congress is to enact a law upon the subject, the appointment of a commission could avail nothing. If, however, nothing more definite can United States mails, to remove restraints to be accomplished, the question of the creation of such commission ought to be considered and acted upon.

> The report also gives full information in regard to the organization, supervision and liquidation of the national banks for the year ended October 31, 1894. It shows that during this period but 50 banks were organized, with a capital stock of \$5,285,000. the smallest number chartered, as well as the minimum amount of capital, in any one year since 1879. The charters of forty-one banks were extended during the year, having an aggregate capital stock of \$5,143,000 and a circulation of \$1,678,050. Ten banks, with a capital stock of \$1,575,000, which were in the hands of receivers at the date of the last report, resumed business during the year, and the charters of six, with a capital stock of \$655,000, and a circulation amounting to \$283,950, expired by limitation, five of which were succeeded by new associations, with a capital stock of \$600,000, and circulation amounting to \$92,250. On October 31, 1894, the total number of national banks in operation was 3,756, with an authorized capital stock of \$672.671.365, represented by 7,955,076 shares of stock, owned by 287,842 shareholders.

> On October 2, 1894, the date of their last report of condition, the total resources of the banks were \$3,473,922,055.27, of which their loans and discounts amounted to \$2,007,122 .-191, 30, and money of all kinds in bank \$422,428. 192.45. Of their liabilities \$1.728.418.819.12 represented individual deposits, {334,121,002.10 surplus and net undivided profits, and \$172.331,978 circulating notes outstanding. The total circulation of national banks on October 31, 1894, amounted to \$207,472,603, a net decrease during the year of \$1,741,563, and a gross decrease of \$8,614,834 in circulation secured by

During the year 79 banks, with an aggregate capital stock of \$10.475.000, passed out of the 2 which failed in 1893, with a capital stock of \$2,770,000, became insolvent and were placed in charge of receivers.

The comptroller suggests the maintenance of a safety fund to be provided by graduated taxation upon the outstanding circulation of the banks until the same shall be equal to not less than 5 per cent. of the total of such outstanding circulation, this fund to be held by the government as an agent only and for the purpose of immediately redeeming the notes of insolvent banks. It is immediately to be replenished out of the assets of the banks on which it shall have a first and paramount lien and from assessment to the extent of the double liability on the shareholders.

Continuing, the comptroller says: "The general government ought to be wholly free from the direct issuing and redeeming of notes to pass as money among the people. No government has ever yet successfully engaged in so doing, and the experience of the government of the United States has proven no exception to the rule. The general cost and loss entailed upon the government and the repeated periods of uncertainty as to the government credit and the stability of our monetary system, have been so great as to make the legal tender and treasury issues of 1890 one of the extraordinary burdens placed upon the people. The issues ought to be redeemed and cancelled, and the government thus enabled to retire from the banking business, a business for

which it is so poorly equipped. In the light of the present condition of the government's finances, Mr. Eckels says, that which ought to have been done when there was a surplus in the treasury cannot now be undertaken, and the same conditions must continue to weaken the country's credit and plague the lines of business unless a means is devised for removing these issues from the channel of current redemption until such time as the government finds itself in a position to do that which at first was the intent of all-gradually redeem and cancel them.

If the franchise is granted the banks of issuing circulating notes against their assets, instead of against bond security, it is suggested that the banks in return should recompense the government by relieving the treasury department of the current redemption in coin of the present treasury issues. The ultimate redemption, of course, must fall upon the government, but the embarrassment does not arise from their ultimate, but from their cur-

rent, redemption. It is therefore suggested that if congress shall repeal the provisions of the present act requiring the national banks to make a deposit of government-bonds in order to secure circulating notes, and substitute therefor a provision giving them instead the right to issue the same against their assets, it incorporate therein and as a part thereof that as a prerequisite to so doing, the banks be compelled to deposit with the treasurer of the United States legal tender issues or issues, under the act of 1890 equal in amount to the difference between the percentage of their capital stock of issues granted against their assets and the total of such capital stock. The deposits thus made ought to remain with the treasury until the bank ceased, either through voluntary or involuntary liquidation, to do business, and in either case the government ought to then redeem and cancel such treasury issues deposited. It is only by such deposit during the life of the bank that the issues named can be removed from current presenta-

tion-for redemption. As against this deposit of legal tenders and treasury notes so made there should be issued to the banks, dollar for dollar, national bank notes, either of the same or different design, as might be deemed best, that thus the volume of the currency as it is now contributed to by the issues of the government should not be contracted so long at least as the panks making such deposits are in existence. The percentage of the bank notes issued against the deposit, should be free from any taxation imposed upon ci lation and ought to be such a percentage as is deemed equitable to be used as a part of the banks' legal reserve held against deposits. The law should make it incumbent upon the banks to deposit with the treasurer for the current redemption of such notes, gold coin, to an amount necessary to make sure their cur-

rent redemption.

#### THE INTERIOR DEPARTMENT. Secretary Hoke Smith Submits His An-

nual Report.

WASHINGTON, Dec. 1.—In his annual report to the president on the operations of the interior department Socretary Hoke Smith reviews the problem of effective work for the advancement of the Indians.

He says the task of the Indian bureau is that of developing a people no longer savage, but still far from civilized, into beings fit for American citizenship and capable of self-support. Two means are chiefly relied upon to accomplish this in the most practical manner

 education and allotments of land in severalty. He does not question the advisability of allotting land to Indians in severalty, but does question its propriety before the Indians have progressed sufficiently to utilize the land when taken. The secretary says that land should not be purchased from the Indians at the best bargain the United States can make, but should be sold by the United States, the department acting as a faithful trustee and obtaining for the Indians every dollar the land

In speaking of the education of the Indians, he says that a definite plan for the Indian, when school is finished, must always be in view. If he is to enter our cities and towns as any other citizen, then his education should be broad and liberal. But if he is to commence his active life in the development of the resources of the reservation, then his education should be directed especially with a view to that life. Secretary Smith adds that even if the education of the young Indian is a preparation for work on the reservation. it should also work to the end that he should be fitted as soon as possible to manage his own affairs free from the paternal care of the department.

Mr. Smith agrees fully in his report with those who oppose the use of public money for the support of sectarian schools; but he thinks it would be scarcely just to abolish them entirely -to abandon instantly a policy so long recognized. He suggests that they be decreased at the rate of not less than 20 per cent. a year. Thus in a few years they would cease to exist. During this time the bureau would gradually be prepared to do without them, while they might gather strength to continue without governmental aid.

The secretary urges that the courts in Arkansas and Texas be abandoned, and that the jurisdiction of the United States court be extended over the territory without regard to citizenship.

The secretary condemns in strong terms the establishment of saloons upon the line of Indian reservations and calls attention to the decision of Judge Bellinger, of the district of Oregon, to the effect that the sale of liquor to an Indian who has received his land in severalty is not in violation of law because by allotment he has become a citizen. If this decision is right, it presents another argument against too speedy allotment of lands in severalty to Indians.

The report shows that the public lands dis-10.377.224.72 acres. It approximates the vacant lands remaining at 606,040,313.71 acres, exclusive of Alaska, which contains 360,000,000 29,000,000 acres in round numbers are embraced in the lists of selections by railroad and wagon road companies awaiting examination and settlement at the close of the fiscal year. The aggregate selection of swamp lands since the passage of the act of 1849 is 80,456,153.51 acres. During the past year 138,159.47 acres were patented under this head.

The total cash receipts from the disposal of. public lands amounted to \$2,674,285,79; \$91.981.-03 were received for Indian lands. Over 35,000 agricultural patents were issued, granting, approximately, 5,640,800 acres. Mineral, mill site and coal patents were issued to the number of 1,429. About 3,100 patents were issued to Indians for allotments or selections in severalty, covering 101,936.34 acres. Patents of all classes issued during the year covered about 7,700,000 acres, a decrease from the pacceding year of over 2,000,000 acres.

Congress is asked to make sufficient appropriations to employ at least one superintendent on each reserve and upon the larger reserves to provide a sufficient force of assistants to prevent public property from being wantonly destroyed. It is also pointed out that a lack of special agents has prevented investigation of proposed forest reserves which would otherwise have been made. The importance of laying a foundation for a wise, comprehensive forestry system to be applied to the timber upon the public lands and the forest reservations is again urged upon

At the close of the fiscal year ending June 30, 1894, 969,544 pensioners were borne upon the rolls, an increase of 3,532 pensioners during the year. Of these, 16,610 pensioners are on account of Indian and other wars prior to the late war, and 15,429 widows, orphans and other dependent relatives. Under the act of June 27, 1890, there are 375,084 pensioners and 94,260 widows and orphans. It is interesting to note that nine widows and three daughters of veterans of the revolution constitute the pension roll for that war. Forty-five survivors of the war of 1812 constitute the remnant of that list. The total amount expended for pensions during the past fiscal year was \$139.804,461.05, leaving a balance from the appropriation in the treasury of \$25,205,712.65. The estimate for the fiscal year 1896 made by the commissioner is \$140,000,000. The commissioner states that, in his opinion, the year 1895, thirty years after the close of the last war, must in the nature of things see the highest limit of the pension roll which, therefore, must begin to decrease. The aggregate of persons added to the rolls during the year is 39,085, and the total number dropped for all causes 37.951.

There were 22.546 patents granted, including reissues and designs, and 1,656 trade marks registered during the past year. The number of patents which expired is 13,167. The total expenditures of the patent office amounted to \$1,053,962. The receipts exceeded the expendi-

tures \$129,560. The commissioner of labor in charge of the eleventh census, for the fiscal year ending June 20, 1894, states that the total disbursements on account of the eleventh census to that date amounted to \$10,365,676.81. At the close of the fiscal year the total number of persons employed in the census office was 679; there are at the present writing aboat 400. The whole number of volumes necessary to comprehend all the facts gathered at the eleventh census is twenty-five; the estimated and actual printed pages of these volumes be-

The report treats at length of many more subjects of minor interest, among them being the bureau of education, public documents railroads, the territories, national parks and forest reserves, and various public institu-

The secretary closes his report with recommendation for an additional building for the interior department, as \$352,699 were paid out for rental of buildings in which several branches of the department have their offices

#### Cotton Compress Burned.

BIRMINGHAM, Ala., Nov. 30.-Thursday night fire destroyed the Birmingham cotton compress and about 1,500 bales of cotton. The compress was valued at \$27,000, and only \$5,000 of insurance was carried. The cotton belonged to Inman & Co., and was fully insured with a New York syndicate.

#### SECRETARY MORTON.

His Report on Affairs in the Department of Agriculture.

WASHINGTON, Nov. 80.-Following is a synopsis of the annual report of Hon. J. Sterling Morton, secretary of agriculture:

The report presents a statement showing that of the total exports of this country for 1894 (fiscal year) farm products aggregated 8628,000.000, or 72.58 per cent. of the whole. The markets of the world, says the secretary, demand from the American farmer the very best quality of breadstuffs and materials. The farmer exchanges his products, the results of his labors, which have specific purchasing power, for money having a general purchasing

Under the heading, "For Prime Pork Give Us Prime Currency," the secretary asks: "Would the \$603,000,000 worth of farm products from the United States sold last year to foreign nations have been as remunerative to the American farmer if they had been paid for in silver as they would have been when paid

for in gold or its equivalent? "When the standard coin of the republic shall be made of metal worth as much after it is melted as it purports to be worth in coin, and the mint values and the commodity values of all metallic money approximately equal it, will not the American farmer and all other citizens become more permanently prosperous? If the American farmer, laborer and manufacturer are compelled by law to submit to the measurement of the value of the products of their efforts by a silver standard, will not the foreigner in buying those products always use the same measure? With his beef, pork and cereals the American farmer buys money, and why should he not demand as superlative quality in that which he buys as the domestic and foreign purchasers insist upon in that which he sells?

"If those buyers demand 'prime' beef and 'prime' pork. why should not the farmer demand 'prime' currency, the best currency, the best measure of value, the most fair and facile medium of exchange, in the most unfluctuating money which the world of commerce has ever

The secretary denies the frequent allegations on the part of European governments regarding disease, etc., and suggests that if certain European nations continued to insist on microscopical inspection of American pork and veterinary inspection of beef with governmental certification to each, the government of the United States might well insist upon inspection and certification by such foreign governments of all importations therefrom, whether edibles or beverages, intended for home consumption.

More than two years have passed without the development of any pleuro-pneumonia or other disease in this country which might be dangerous to British stock interests. The hoped-for revocation, nevertheless, remains unrealized. The scientific investigations of the bureau have progressed steadily. Special mention is made in the appropriation bill for the current year of tuberculosis and sheep scab as diseases the secretary of agriculture is authorposed of during the past fiscal year aggregate | ized to guard against in view of the danger to human life from tuberculosis. The sterilization of milk has been thoroughly explained in a leasiet which has had a wide circulation. It acres, and military and other reservations; appears that sterilization of milk may be a perfect safeguard wherever milk is used.

The secretary reviews the subject of foreign markets and gives figures of our agricultural exports, especially those to Great Britain. That country paid during the year 1893 for American breadstuffs, provisions, cotton and tobacco over \$324,000,000. Including about \$10,-000,000 worth of mineral oils with agricultural exports, the united kingdom took 54.3 per cent. of all exports of breadstuffs, provisions, mineral oils, cotton and tobacco.

Of dressed beef Great Britain took from us during the first six months of the year 1894 \$10,000,000 worth. Australasia is our chief competitor for the trade. Mr. Morton deems it probable that the American farmer will find more advantage from the shipment of dressed beef than from the exportation of live

He reports a very large increase in the exports of beef and hog products over the year previous, with on, the other hand, a marked decline in the exports of wheat. The review of the foreign market leads him to certain conclusions as to the future of our export trade in agricultural products as follows:

"Competition of Russia, Argentina, Australia and other countries favored by conditions which enable them to grow wheat at a low cost, and especially by the proximity of their wheat-growing regions to water communication, warns American farmers to no longer depend upon wheat as a staple export crop. On the other hand a good market, at fair prices, is to be found in the United Kingdom for barley and corn, which, owing to the great variety of uses to which they may be applied, promise to be in constant and increasing

With reference to the weather bureau the secretary shows that nearly \$140,000 has been saved from the appropriation and covered back into the treasury. He shows that by heeding the admonitions of the bureau relative to the great tropical storm of September, 1894 vessels valued at over \$17,000 000 were saved. So in October, when over 1,200 vessels, valued at \$19.000,000, were kept in port, owing to the bureau's warnings. Moreover, many human lives were preserved. The report indicates that the recent discus-

sion in several of the larger cities resulting in a lessening of the cost of bread and the betterment of the article itself, was the outgrowth of the department bulletins bearing upon the nutrition investigations recently undertaken. Secretary Morton devotes several pages covered with tables in showing what the expense of the department has been each year since 1878. He again reiterates the conviction that the promiscuous free distribution of department publications should be abolished.

The secretary is opposed to the whole business of giving away seeds, and says: "Educationally this enormous sum could be made of great advantage to farmers if expended in the publication of practical bulletins, new ideas being of more value than old seeds.

In lieu of \$160,000, the present appropriation for seeds, he proposes \$56,000 to be devoted to the issue of such bulletins If seed is to be given away gratuitously at all, it should be done under the direction of the several experiment stations, the appropriation of each being increased \$500 for the purpose.

#### HEALTH OF THE PRESIDENT.

He Has Suffered Severely from Rheumatism, But Is Better.

WASHINGTON, Nov. 30.-The president continues to improve in health. He is much better and expects to be out in a few days, said Secretary Thurber, in reply to an inquiry concerning the health of the chief executive. The president has suffered much pain from his foot, and at times has been obliged to lay aside his work on this account. He has had these rheumatic attacks before, and the trouble is no more severe than those he has previously ex-

#### Here and There.

A week or ten days of heavy feeding will materially add to the condition of ducks and chickens, and produce better prices. prostration. Turkeys and geese require longer, but, if thrifty, can usualy be fatted for market with two weeks of liberal feeding on a Sunday. fattening ration.

The Jackson Star says: "M. G. Carlton, the facetious editor of the Grass Lake News, is nothing if not original. In describing a wedding that took place in this classic village last week he naively says: 'The bride wore myrtle green henrietta, with yellow roses, the maid of honor wore white chrysanthemums.' Pretty chilly weather this for no coverning but those cold slaw flowers, but M. G. is a reporter of experience and caution."

Betting is a bad thing always. It must be especially bad where a man makes a fooolish bet. A ride in a wheelbarrow as a method of paying an election bet seems silly and childish enough. A case has occured in New York state, however, in which a devotee of Hill agreed to pay one cent for every vote that Morton received above the Democratic ticket. The sum which he has to hand over if the terms of the wager are strictely enforced is something like \$1,600.

The Livingston Democrat says an irresistible female is canvassing this state selling pants buttons. She snaps one of her buttons on the pants of a married man, and he is obliged to buy a box to explain some instances she will clip off two or three buttons and the victim has to buy a box or go around holding up his pants. If you should see a female peddler you had this pants button fiend.

The Cincinnati Price Current in its last week's summary says, very full returns ing, indicating about 40,000,000 bushels already for western states, and possibly 75,000,000 bushels for entire season, with something additional for unimportant states. Wheat feeding is being curtailed in many sections from availability now of corn. Marketing of wheat continues very sparingly, stocks of flour in west being considerably reduced; largely below that of one year ago. Moderate increase in offerings of corn.

The opinion is confidently expressed It furnish a large share of the power, light and transportation in all up-to date farming communities. When it comes to pass prices as usual are that a farmer and his family can get on an evening at a social gathering or entertain ment ten miles distant and be at home by Lowest prices ever reasonable bed time, life in the country will be very different from what it is now. The cost of building and equiping an electric line through a township will cost less than the average mile of steam railway. and by-and by people will be smiling at the present expencive mode of traveling by

> Superintendent of Public Instruction Pattengill believes public school laws needing changing and will present them in outline to the next state teachers association for ratification before going to the legislature. ### HIS ANNUAL MESSAGE

President Cleveland Writes of Topics of the Times.

#### HIS RECOMMENDATIONS TO CONGRESS

He Favors a Reduction of the Duty on Sugar-Interesting Statistics from the Various Departments-Supports the Recent Issue of Bonds.

WASHINGTON, Dec. 3.-The following is a synoposis of President Cleveland's annual message read at the opening of the second session of the Fifty-third

TO THE CONGRESS OF THE UNITED STATES: The assemblage within the nation's legislative salls of those charged with the duty of making laws for the benefit of a generous and free sople impressively suggests the exacting obigation and inexorable responsibility involved in their task. At the threshold of such labor w to be undertaken by the congress of the United States and in the discharge of an executive duty enjoined by the constitution I submit this communication, containing a brief tatement of the condition of our national afairs, and recommending such legislation as eems to me necessary and expedient.

Belgium's Needless Restrictions I have endeavored to impress upon the Beldan government the needlessness and positive sarmfulness of its restrictions upon the importation of certain of our food products, and have strongly urged that the rigid supervision and inspection under our laws are amply sufacient to prevent the exportation from this country of diseased cattle and unwholesome

Our Course in Brazil.

The termination of the civil war in Brazil has been followed by the general prevalence of peace and order. It appearing at an early stage of the insurrection that its course would call for unusual watchfulness on the part of this government, our naval force in the harbor of Rio de Janeiro was strengthened. This precaution, I am satisfied, tended to restrict the sue to a simple trial of strength between the Brazilian government and the insurgents and o avert complications which at times seemed

Reciprocity Treaty Abrogated. Although the government of Brazil was duly sotified that the commercial arrangement excountry, based on the third section of the tariff act of 1890, was abrogated on August 28, 1894, by the taking effect of the tariff law now in force. that government subsequently notified us of its intention to terminate such arrangement on the first day of January, 1895, in the exercise of the right reserved in the agreement between the two countries. I invite attention to the correspondence between the secretary of state and the Brazilian minister on this subject.

New Treaty with China. On the 17th of March last a new treaty with China in further regulation of immigration was signed at Washington and on August it received the sanction of the senate. Ratification on the part of China and formal exchanges are awaited to give effect to this mutually beneficial convention.

Mediation Between China and Japan. A gratifying recognition of the uniform impartiality of this country towards all foreign states was manifested by the coincident reuest of the Chinese and Japanese governments that the agents of the United States should, within proper limits, afford protection to the subjects of the other during the suspension of diplomatic relations due to a state of war. The delicate office was accepted, and a misapprehension which gave rise to the belief that in affording this kindly unofficial protection our agents would exercise the same authority which the withdrawn agents of the belligerents has exercised was promptly corrected. Although the war between China and apanendangers no policy of the United States fit deserves our gravest consideration, by reason of its disturbance of our growing commerce interests in the two countries.

Germany Embargo on Our Beef. Acting upon the reported discovery of Texas fever in cargoes of American cattle. the German prohibition against importations of livestock and fresh meats from this country has been revived. It is hoped that Germany will soon become convinced that the inhibition is as needless as it is harmful to mutual in-

Favors Partial Repeal of Duty on Sugar. The German government has protested against that provision of the customs tariff act which imposes a discriminating duty of onetenth of a cent a pound on sugars coming from countries paying an export bounty thereon. claiming that the exaction of such duty is in contravention of articles five and nine of the treaty of 1828 with Prussia.

In the interests of the commerce of both countries and to avoid even the accusation of trenty violation. I recommend the repeal of so much of the statute as imposes that duty.

Behring Sea Controversy. Early in the present year an agreement was reached with Great Britain concerning instruc-

tions to be given to the naval commanders of the two governments in Behring sea and the contiguous north Pacific ocean for their guidance in the execution of the award of the Paris tribunal of arbitration and the enforceof regulations therein prescribed. for the protection of seal life in the waters mentioned. An understanding has also been reached for the payment by the United States of \$425,000, in full satisfaction of all claims which may be made by Great Britain for damages growing out of the controversy as to fur seals in Behring sea or the seizure of British vessels engaged in taking seal in those waters. The award and findings of the Paris tribunal to s great extent determined the facts and principles upon which these claims should be adjusted, and they have been subjected by both povernments to a thorough examination upon the principles as well as the facts which they involve. I am convinced that a settlement apon the terms mentioned would be an equitabie and advantageous one, and I recommend that provision be made for the prompt payment of the stated sum. Thus far only France and Portugal have signified their willingness to adhere to the regulations established under the award of the Paris tribunal of arbitration.

Recognition of the Hawaiian Republic. Since communicating the voluminous correspondence in regard to Hawaii and the action taken by the senate and house of representatives on certain questions submitted to the judgment and wider discretion of congress, the organization of a government in place of the provisional arrangement which followed the deposition of the queen has been announced, with evidence of its effective operation. The recognition usual in such cases has been accorded the new government.

Relations with Mexico.

Good will fostered by many interests in sommon has marked our relations with our mearest southern neighbor. Peace being restored along her northern frontier. Mexico has sked the punishment of the late disturbers of ber tranquillity. There ought to be a new freaty of commerce and navigation with that sountry to take the place of the one which terminated thirteen years ago. The friendliness of the intercourse between the two countries is attested by the fact that during this long period the commerce of each has steadily in-creased under the rule of mutual considera-tion, being neither stimulated by conventional arrangements nor retarded by jealous rivalries r selfish distrust.

The Bluefields Incident.

Prominent among the questions of the year was the Bluefields incident. in what is known as the Mosquito Indian strip, bordering on the latin the Jurisdiction of Nicaragua. By the treaty of 1860 between Great Britain and Nicaragua the former government expressly recognized the sovereignty of the latter over the strip, and a limited form of the latter over the strip, and a limited form of self-government was guaranteed to the Mosquito Indians, to be exercised according to their customs, for themselves and other dwellers within its limits. The so-called native government, which grew to be largely made up of aliens, for many years disputed the sovereignty of Nicaragua over the strip and claimed the right to maintain therein a practically independent municipal government. Early in the past effort years of trade-dollar bullion.

The total coinage of all metals of our mints during the last fiscal year consisted of 63,485,-220 pieces, valued at \$106,216,730.06, of which standard silver dollars: \$6.024,140.30 in subsidiary silver coin, and \$716,919.26 in minor coin. During the calendar year 1893 the production of precious metals in the United States was estimated at 1,739,323 fine ounces of gold, of the commercial and coinage value of \$35,955,000

Nicaragua to maintain sovereignty over the Mosquito territory led to serious disturbances, culminating in the suppression of the native government and the attempted substitution of an impracticable composite administration in which Nicaragua and alien residents were to participate. Failure was followed by an in-surrection which for a time obstructed Nicaraguan rule, expelling her officers and restoring the old organization. This in turn gave place to the existing local government establishing and upheld by Nicaragua.

Relations with Russia. The sealing interests of Russia in Behring sea are second only to our own. A modus vi-vendi has therefore been concluded with the imperial government restrictive of poaching on the Russian rookeries and of sealing in waters which were not comprehended in the protected area defined in the Paris award. Occasion has been found to urge upon the

Russian government equality of treatment for our great life insurance companies whose op-erations have been extended throughout Europe. Admitting, as we do, foreign corpora-tions to transact business in the United States, we naturally expect no less tolerance for our own in the ample fields of competition abroad. Salvadorians Sheltered.

The government of Salvador having been overthrown by an abrupt popular outbreak, certain of its military and civil officers, while hotly pursued by infuriated insurgents, sought refuge on board the United States warship Bennington, then lying in a Salvadorian port. Although the practice of asylum is not favored by this government, yet, in view of the imminent peril which threatened the fugitives, and solely, from considerations of humanity, they were afforded shelter by our naval commander, and when afterwards demanded under our treaty of extradition with Salvador for trial on charges of murder, arson and robbery. I directed that such of them as had not voluntarily left the ship be conveyed to one of our nearest ports, where a hearing could be had before a judicial officer, in compliance with the terms of the treaty. On their arrival at San Francisco such a proceed-Francisco such a proceed-promptly instituted before the United States district judge, who held that the acts constituting the alleged offenses were political, and discharged all the accused except one Cienfuegos, who was held for an attempt to murder. Thereupon I was constrained to direct his release, for the reason that an at-

render to the Salvadorian authorities had been demanded. Remonstrance with Spain.

tempt to murder was not one of the crimes

charged against him and upon which his sur-

Unreasonable and unjust fines imposed by Spain on the vessels and commerce of the United States have demanded from time to time during the last twenty years earnest remonstrance on the part of our government. In the immediate past exorbitant penalties have been imposed upon our vessels and goods by customs authorities of Cuba and Porto Rico for clerical errors of the most trivial character in the manifests or bills of lading. In some cases fines amounting to thousands of dollars have been levied upon cargoes or the carrying vessels when the goods in question were entitled to free entry. Fines have been exacted even when the error had been detected and the Spanish authorities notified before the arrival of the goods in port.

Turkey and the Armenians. In my last annual message I adverted to the claim on the part of Turkey of the right to expel, as persons undesirable and dangerous, Armenians naturalized in the United States and returning to Turkish jurisdiction. Numerous questions in this relation have arisen. While this government acquiesces in the asserted right of expulsion it would not consent that Armenians may be imprisoned or otherwise punished for no other reason than having acquired without imperial consent American

citizenship.

Disturbances in Samoa-In my last annual message Irreferred briefly to der the operation of the Berlin treaty as signally illustrating the impolicy of entangling alliances with foreign powers, and on May 9, 1894, in response to a resolution of the senate. I sent a special message and documents to that body on the same subject which emphasized my previously expressed opinions. Later occurrences, the correspondence in regard to which will be laid before congress, further, demonstrate that the government which was devised by the three powers and forced upon the Samoans against their inveterate hostility can be maintained only by continued presence of forpresence of foreign military force and at no small sacrifice of life and treasure.

Revenue Receipts.

The secretary of the treasury reports that the receipts of the government from all sources of revenue during the fiscal year ending June 30, 1894, amounted to \$372.802,498.29, and its expenditures to \$442.605,758.87, leaving a deficit of \$69.803.260.58. There was a decrease of \$15.952,— 674.66 in the ordinary expenses of the government, as compared with the fiscal year 1893. There was collected from customs \$131,818,-530.62, and from internal revenue \$147.168,449 70. The balance of the income for the year, amounting to \$93,815,517.97, was derived from the sales of lands and other sources. Imports and Exports.

The value of our dutiable imports amounted to \$275.199.086, being \$146,657,625 less than during the preceding year, and the importations free of duty amounted to \$379.795.536, being \$69,748,-675 less than during the preceding year. The receipts from customs were \$73.5486.11 less. and from internal revenue \$14,836,539.97 less

The total tax collected from distilled spirits was \$85,259,250.25; on manufactured tobacco, \$28.617,898.62, and on fermented liquors, \$31,414,-

Our export of merchandise, domestic and foreign, amounted during the year to \$892,140,-572, being an increase over the preceding year of \$44,495,378.

Movement of Gold and Silver.

The total amount of gold exported during the fiscal year was \$76,898.061 as against \$108,-680.444 during the fiscal year 1893. The amount imported was \$72,449.119 as against \$21,174.381 during the previous year. The imports of silver were \$13,286,552, and the exports were \$50,-

Sugar Bounty.

The total bounty paid upon the production of sugar in the United States for the fiscal year was \$12,100,208.89, being an increase of \$2,725,-078.01 over the payments made during the pre-ceding year. The amount of bounty paid from July 1, 1894, to August 28, 1894, the time when further payments ceased by operation of law, was \$966,185.84. The total expense incurred in the payment of the bounty upon sugar during the fiscal year was \$130.140.85.

An Estimated Deficit.

It is estimated that upon the basis of our present revenue laws the receipts of the government during the current fiscal year ending June 30, 1895, will be \$424,427,748.44 and its expenditures \$444,427,748.44, resulting in a deficit of \$20,000,000.

The Circulation.

On the first day of November, 1894, the total of the first day of November, 1894, the total stock of money of all kinds in the country was \$2,240,773,888, as against \$2,204,651,000 on the 1st of November, 1893, and the money of all kinds in circulation or not included in the treasury holdings was \$1,672,093,422, or \$24,27 per capita upon an estimated population of 68,887,000.

Purchase of Silver Bullion.

At the same date there was held in the treasury gold bullion amounting to \$44.615,177.55 and silver bullion which was purchased at a cost of \$127,779,988. The purchase of silver bullion under the act of July 14, 1890, ceased on the first day of November, 1893, and up to that time there had been purchased during the fiscal year 11,917,658.78 fine ounces, at a cost of \$8.715,-511.32, an average cost of \$0.7313 per fine ounce. The total amount of silver purchased from the time that law took effect until the repeal of its purchasing clause, on the date last mentioned, was 168.674.682.53 fine ounces, which cost \$155,-931,002.25, the average price per fine ounce being \$0.9244.

The total amount of standard silver dollars coined at the mints of the United States since the passage of the act of February 28, 1878, is \$421,776,408, of which \$378,165,708 were coined under the provisions of that act. \$38,531,143 under the provisions of the act of July 14, 1890, and \$5,078,472 under the act providing for the coinage of trade-dollar bullion.

and 60,000,000 fine ounces of silver of the bullion or market value of \$46,800,000 and of the coinage value of \$77.576,000.

National Banks. Fifty national banks were organized during the year ending October 31, 1894, with a capita of \$5,285,000, and seventy-nine with a capital of \$10,475,000, went in voluntary liquidation. Twenty-one banks, with a capital of \$2,770,000, were placed in the hands of receivers. The total number of national banks in existence of the 31st day of October last, was 3,756, being 40 less than on the 31st day of October, 1893. The capital stock paid in was \$672,671,365, being \$9.678,491 less than at the same time in the previous year, and the surplus fund and undivided profits, less expenses and taxes paid, amounted to \$334,121,082,10, which was \$16,080,720 less than \$1,000,000,000. was \$16,089,780 less than on October 31, 1893. The Army.

From the report of the secretary of war it appears that the strength of the army on September 30, 1894, was 2,135 officers and 25,765 enlisted men. Although this is apparently a very slight decrease compared with the previous year, the actual effective force has been increased to the equivalent of nearly two regiments through the reorganizaof the system of recruiting and the consequent release to regimental duty of the large force of men hitherto serving at the recruiting depots. The abolition of these depots, it is predicted, will furthermore effect an annual reduction approximating \$250,000 in the direct expenditures, besides promoting generally the health, morals and discipline of

Should Have Its Full Legal Strength.

While the maximum legal strength of the army is 25,000 men, the effective strength through various causes, is but little over 20,000 men. The purpose of congress does not, therefore, seem to be fully attained by the existing condition. While no considerable increase in the army is in my judgment demanded by recent events, the policy of sea coast fortification in the prosecution of which we have been steadily engaged for some years has so far developed as to suggest that the effective strength of the army be now made at least equal to the legal strength. Army and the Strikes.

It is hardly necessary to recall the fact that in obedience to the commands of the constitution and the laws, and for the purpose of protecting the property of the United States, aiding the process of federal courts and removing lawless obstructions to the performance by the government of its legitimate functions, it became necessary in various localities during the year to employ a considerable portion of the regular troops. The duty was discharged promptly, courageously and with marked dis-

cretion by the officers and men. Expenses of the War Department.

The total expenditures for the war department for the year ended June 30, 1894, amounted to \$56.039.009.34. Of this sum, \$2,000.614.99 was for salaries and contingent expenses, \$23.665.156. 6 for the support of the military establishments, \$5.001.682 23 for miscellaneous objects and \$25,-371,555.96 for public works. This latter sum includes \$19,494,037.49 for river and harbor improvements and \$3,947,863,56 for fortifications and other works of defense. The appropriations for the current year aggregate \$52,429,-112.78, and the estimates submitted by the secretary of war for the next fiscal year call for appropriations amounting to \$52,318,629,55.

The Militia.

The total enrollment of the militia of the several states is 117,533 officers and enlisted men, an increase of 5,343 over the number reported at the close of the previous year. The reports of militia inspections by regular army officers show a marked increase in interest and efficiency among the state organizations, and I strongly recommend a continuance of the policy of affording every practical encouragement possible to this important auxiliary of our military establishment. .

More Courts Needed. The report of the attorney general notes the gratifying progress made by the supreme court in overcoming the arrears of its business and in reaching a condition in which it will be able to dispose of cases as they arise without any unreasonable delay. This result is, of course, very largely due to the successful working of the plan inaugurating circuit courts of appeals. In respect to these tribunals the suggestion is made, in quarters entitled to the highest consideration, that an additional circuit judge for each circuit would greatly strengthen these courts and the confidence reposed in their adjudications, and that such an addition would not create a greater force of judges than the increasing business of such courts requires. I commend the suggestion to the careful consideration of the congress.

Federal Prisoners. Eight years ago, in my annual message, I

urged upon the congress as strongly as I could the location and construction of prisons for the confinement of United States A similar recommendation has been made from time to time since, and a few years ago a law was passed providing for the selection of sites for three such institutions. No appropriation has, however, been made to carry the act into effect, and the old and discreditable condition still exists. The Postal Service.

The report of the postmaster-general presents a comprehensive statement of the operations of the post office department for the last fiscal year. The receipts of the department during the year amounted to \$75,080,479.04 and the expenditures to \$84.324.414.15. The transactions of the postal service indicate with barometric certainty the fluctuation in the business of the country. Inasmuch, therefore, as business complications continued to exist throughout the last year to an unforeseen extent it is not surprising that the deficiency of revenue to meet the expendi-tures of the post office department, which estimated in advance at about \$8,000,000 should be exceeded by nearly \$1,250,-

Reform in Second Class Matter. The expenditures increase steadily and nec-

essarily with the growth and needs of the country so that the deficiency is greater or less in any year depending upon the volume of receipts. The postmaster general states that this deficiency is unnecessary and might be obviated at once if the law regulating rates upon mail matter of the second class was modified. The rate received for the transmission of this second-class matter is one cent per pound, while the cost of such transmission to the government is eight times that amount. general terms of the law this rate covers newspapers and periodicals. of the meaning of terms from time to time have admitted to the privileges intended for legitimate newspapers and periodicals a surprising range of publica-tions and created abuses the cost of which amounts in the aggregate to the total deficiency of the post office department.;

Growth of the Service.

The total number of post offices in the United States on the 30th day of June, 1894, was 69,805, an increase of 1,493 over the preceding year. Of these 3,428 were presidential, an increase of that class of 68 over the preceding year. Six hundred and ten cities and towns are provided with free delivery. Ninety-three other cities and towns entitled to this service under the law have not been accorded it on account of insufficient funds. The expense of free delivery for the current fiscal year will be more than \$12,300,000 and under existing legislation this item of expenditure is subject to constant increase. The estimated cost of rural free delivery generally is so very large that it ought not to be considered in the present condition of affairs. During the year 830 additional domestic money-order offices were established The total number of these offices at the close of the year was 19.264. There were 14.304.041 money orders issued during the year, being an increase over the preceding year of 994,306. value of these orders amounted to \$138,793,-579.49, an increase of \$11,217,145.84. There were also issued during the year postal notes amounting to \$12,649,094.55.

During the year 218 international money order officers were added to those already established, making a total of 2,625 such offices in operation June 30, 1894. The number of international money orders issued during the year

national money orders issued during the year was \$17.822, a decrease in number of 138.176.

and their value was \$13.792,455.31, a decrease in amount of \$2.549,382.55. The number of orders paid was \$61.180, an increase over the preceding year of 60.263, and their value was \$6,568,-493.78, an increase of \$1.285.118.08

From the foregoing statements it appears that the total issue of money orders and postal notes for the year amounted to \$165.235.129.35. The number of letters and packages mailed during the year for special delivery was 3.436,-970. The special delivery stamps used upon these letters and packages amounted to \$343,-697. The messengers fees paid for their delivery amounted to \$261,209.70, leaving a balance in favor of the government of \$82,467.30.

The Navy.

Attention is called to the report of the se retary of the navy, which shows very gratify-ing progress in the construction of ships for our new navy. All the vessels now building, in-cluding the three torpedo boats authorized at the last session of congress and excepting the first-class battleship Iowa, will probably be completed during the coming fiscal year. The estimates for the increase of the navy for the year ending June 30, 1896, are large, but they include practically the entire sum necessary to complete and equip all the new ships not now in commission, so that unless new ships are authorized the appropriations for the naval service for the fiscal year ending June 30, 1897, should fall below the estimates for the coming year by at least \$12,000,000. More Battleships Needed.

The secretary presents with much earnest ples for the authorization of three ad ditional battleships and ten or twelve torpedo boats. While the unarmored vessels heretofore authorized, including those now nearing completion, will constitute a fleet, which it is believed is sufficient for ordinary cruising pur poses in time of peace, we have now completed and in process of construction but four firstclass battleships and but few torpedo boats. The manufacture of armor requires ex-pensive plant and the aggregation of many skilled workmen. All the armor necessary to complete the vessels now building will be delivered before the 1st of June next. If no new contracts are given out contractors must dis-band their workmen and their plants must lie Battleships authorized at this time would not be well under way until late in the coming fiscal year, and at least three years and a half from the date of the contract would be required for their completion. The secretary states that not more than 15 per cent. of the cost of such ships need be included in the ap-propriation for the coming year. I recommend hat provision be made for the construction of additional battleships and torpedo boats.

The secretary recommends the manufacture not only of a reserve supply of ordnance and ordnance material for ships of the navy, but also a supply for the auxiliary fleet. Guns and their appurtenances should be provided and kept on hand for both these purposes. have not to-day a single gun that could be put upon the ships Paris or New York of the International Navigation company or any other ship of our reserve navy. The manufacture of guns at the Washington navy yard is proceeding satisfactorily, and none of our new ships will be required to wait for their guns or ordnance equipment. Civil Service in the Navy.

The system adopted a few years ago regulating the employment of labor at the navy yards is rigidly upheld and has fully demonstrated its usefulness and expediency. within the domain of civil service reform inasmuch as workmen are employed through a board of labor selected at each navy yard and are given work without reference to politics and in the order of their application. preference, however, being given to army and navy veterans and those having former navy yard experience. Amendments suggested by experience have been made to the rules regulating the system. Through its operation the work at our navy yards has been vastly improved in efficiency and the opportunity to work has been honestly and fairly awarded to willing and competent applicants. It is hoped that if this system continues to be strictly adhered to there will soon be as a natural consequence such an equalization of party benefits as will remove all temptation to relax or abandon it. The Public Domain.

The report of the secretary of the interior exhibits the situation of the numerous and interesting branches of the public service connected with his department. I commend this report and the valuable recommendations of the secretary to the careful attention of the congress. The public land disposed of during the year amounted to 10,406,100.77 acres, including 28.876.05 of Indian lands. It is estimated that the public domain still a little more than remaining amounts to 600,000,000 acres, including, however, about 360,000,000 acres in Alaska as well as military reservations and railroad and other selections of lands yet unadjudicated. The total cash receipts from sale of lands amounted to \$2.674,-285.79 including \$91,981.03 received for Indian lands. Thirty-five thousand patents were issued for agricultural lands and 3,100 patents were issued to Indians on allotments of their lands in severalty, the land so allotted being inalienable by the Indian al-lottees for a period of twenty-five years after patent. They were certified and patented on account of railroad and wagon road grants during the year. During the year 865.556.45 acres of land and at the close of the year 29.000,000 acres were embraced in the lists of selections made by railroad and wagon-road companies and awaited settlement. lections of swamp lands and that taken as indemnity therefor since the passage of the act providing for the same in 1849, amount to nearly or quite 80,500,000 acres, of which 58,000,-000 have been patented to states. About 138,-000 acres were patented during the last year. Nearly 820,000 acres of school and education grants were approved during the year, and at its close 1,280,363.81 acres remained unadjusted. Protection of the Lands.

It appears that the appropriation for the current year on account of special service for the protection of the public lands and the timber thereon is much less than those for previous years and inadequate for an efficient performance of the work. A larger sum of money than has been appropriated during a number of years past on this account has been returned to the government as a result of the labors of those employed in the particular service mentioned, and I hope it will not be crippled by insufficient appropriation. I fully indorse the recommendation of the secretary that adequate protection be provided for our forest reserves, and that a comprehensive forestry system be inaugurated. Such keepers and superintendents as are necessary to protect the forests already reserved should be provided. I am of the opinion that there should be an abandonment of the policy sanctioned by present laws under which the government for a very small consideration is rapidly losing title to immense tracts of land covered with timber which should be properly re-served as permanent sources of timber supply.

A Land Court Needed. An exceedingly important recommendation of the secretary relates to the manner in which contests and litigated cases growing out of efforts to obtain government land are deter-mined. The entire testimony upon which these controversies depend in all their stages is taken before the local registers and receivers, and yet these officers have no power to subpoena witnesses or to enforce their attendance to testify. These cases, numbering 3.000 or 4.000 annually, are sent by the local officers to the commissioner of the general land office for his action. The everencies of his other duties oblige him to act upon the decisions of the registers and receivers without an opportunity of thorough personal examination. Nearly 2,000 of these cases are appealed annually from the commissioner to the secretary of the interior. Burdened with other important administrative duties, his determination of these appeals must be almost perfunctory and based upon the examination of others, though this determination of the secretary operates as a final adjudication upon rights of very great importance. I concur in the opinion that the commissioner of the general land office should be relieved from the duty of deciding litigated land cases; that a nonpartisan court should be created to pass on such cases, and that the decisions of this court should be final, at least so far as the decisions of the department are now final. Allotments in Severalty.

I have always believed that allotments of reservation lands to Indians is severalty should be made sparingly or at least slowly and with the utmost caution. In these days when white agriculturists and stock raisers of experience and intelligence find their lot a hard one, we ought not to expect Indians, unless far advanced in civilization and habits of industry, to support themselves on the small tracts of land usually allotted to them. If the self-supporting scheme by allotment fails the wretched pauperism of the allottees which results is worse than their original condition of regulated dependence. It is evident that the evil consequences of ill advised allotments are intensified in cases where the false step cannot be retreated on account of the purchase by the government of reservation lands remaining after allotments are made and the disposition of such remaining lands to settlers or purchasers from the government. to support themselves on the small tracts of chasers from the government.

Honesty in Dealing with the Indians. Whenever allotments are made and any Indian on the reservation has previously settled upon a lot and cultivated it, or shown a disposition to improve it in any way, such lot should certainly be allotted to him and this should be made plainly obligatory by statute.

In the light of experience, and consider In the light of experience, and considering the uncertainty of the Indian situation and itself-gencies in the future. I am not only disposed to be very cautious in making allotments, but I incline to agree with the secretary of the interior in the opinion that when allotments are made the balance of reservation land remaining after government, instead of being bought by the government from the Indians and opened for settlement with such scandals and unfair practices as seem unavoidable, should remain for a time at least as common land or be sold by the government on behalf of the Indians in an orderly way and at fixed prices, to be determined by its location and desirability. by the government on benair of the Indians in an orderly way and at fixed prices, to be determined by its location and desirability, and that the proceeds, less expenses, should be held in trust for the benefit of the Indian pro-

Judian Schools.

Indian Schools.

The intelligent Indian school management of the past year has been followed by gratifying results. Efforts have been made to advance the work in a sound and practical manner. Five institutes of Indian teachers have been held during the year, and have proved very beneficial through the views exchanged and methods discussed, particularly applicable to Indian education. Efforts are being made in the direction of a gradual reduction of the number of Indian contract schools, so that in a comparatively short time they may give way altogether to government schools, and it is a comparatively short unit only may give way altogether to government schools, and it is hoped that the change may be so gradual as to hoped that the change may be so graunal as to be perfected without too great expense to the government or undue disregard of investments made by those who have established and are maintaining such contract schools. Pensions.

At the close of the last fiscal year on the 30th of June, 1894, there were 969.544 persons on our pension rolls, being a net increase of 3.53; over the number reported at the end of the over the number reported at the end of the previous year. These pensioners may be classified as follows: Soldiers and sallors, survivors of all wars, 753.968; widows and relatives of deceased soldiers, 215.162; army nurses in the war of the rebellion, 414 Of these pensioners 32 039 are surviving soldiers. these pensioners 32,039 are surviving soldiers of Indian and other wars prior to the late civil war, and the widows and relatives of such soldiers. The remainder, numbering 937,505, are receiving pensions on account of the war of the rebellion, and of these 469.344 are on the rolls under the authority of the act of June 27, 1890, sometimes called the dependent pension law. The total amount expended for pension law. The total amount expended for pensions during the year was \$139.804.461.05, leaving an unexpended balance from the sum appropriated of \$25,205,712.65. The sum necessary to meet pension expenditures for the year ending June 30, 1896, is estimated at \$140,000,000. Pension Frauds.

The barefaced and extensive pension frauds exposed under the direction of the courageous and generous veteran soldier now at the head of the bureau leaves no room for the claim that no purgation of our pension rolls was needed or that continued vigilance and prompt action are not necessary to the same end. The accusation that an effort to detect pension frauds is evidence of unfriendliness towards our worthy veterans, and a denial of their claims to the generosity of the government. suggests an unfortunate indifference to the commission of any offense which has for its motive the securing of a pension and indicates a willingness to be blind to the existence of mean and treacherous crimes which play upon demagogic fears and make sport of the patri-

otic impulse of a grateful people. Eleventh Census. The completion of the eleventh census is now in charge of the commissioner of labor. The total disbursements on account of the work for the fiscal year ending June 30, 1894, amounted to \$10,365,676.81. At the close of the year the number of persons employed in the census office was 679. At present there are about 40). The whole number of volumes necessary to comprehend the eleventh census will be twenty-five, and they will contain 22,270 printed pages. The assurance is confi made that before the close of the present calendar year the material still incomplete will be practically in hand, and the census can certainly be closed by the 4th of March. 1895 After that the revision and proof-reading necessary to bring out the volumes will still be required The text of the census volumes has been limited, as far as possible, to the analysis of statistics presented. The method, which is in accordance with law, has caused more or less friction, and in some instances individual disappointment, for when the commissioner of labor took charge of the work he found much matter on hand, which, according to this rule, he was compelled to discard. The census is being prepared according to the theory that it is designed to collect facts and certify them to the public-not to elaborate arguments or to pre-

sent personal views. Department of Agriculture

The secretary of agriculture in his report reviews the operations of his department for the last fiscal year, and makes recommendations for the further extension of its usefulness. He reports a saving in expenditures during the year of \$600.000, which is covered back into the treasury. This sum is 23 per cent of the entire appropriation. A special study has been made of the demand for American farm products in all foreign markets, especially Great

That country received from the United States during the nine months ending September 30, 1894, 305,910 live beef cattle, value at \$26,500,000, as against 182.611 cattle, valued at \$16,634,000, during the same period for 1893 During the first six months of 1894 the United Kingdom took also 112,000,000 pounds of dressed beef from the United States, valued at nearly \$10,000,000. The report shows that during the nine months immediately preceding September 30, 1894, the United States exported to Great Britain 222,675,000 pounds of pork; of apples, .900,000 bushels, valued at {2,500,000, and of horses. 2.811, at an average value of \$139 per head. There was a falling off in American wheat exports of 13,500,000 bushels, and the secretary is inclined to believe that wheat may not, in the future, be the staple export cereal product of our country, but that corn will continue to advance in importance as an export on account of the new uses to which it is con-

stantly being appropriated. The exports of agricultural products from the United States for the fiscal year ending June 30, 1894, amounted to \$628,363,033, being 72.28 per cent of American exports of every description, and the United Kingdom of Great Britain took more than 54 per cent. of all farm products finding foreign markets.

The Weather Bureau.

The amount appropriated for the weather bureau was \$951,100; of that sum \$138,500, or 14 per cent., has been saved and is returned to the treasury. As illustrating the usefulness of this service, it may be here stated that the warnings which were generally given of two tropical storms occurring in September and October of the present year resulted in detaining safely in port 2,305 vessels, valued at 86.283,913, laden with cargoes of probably still greater value. What is much more important and gratifying many human lives on these ships were also undoubtedly saved.

Bureau of Animal Industry. The appropriation to the bureau of animal industry was \$850,000, and the expenditures for industry was \$850,000, and the expenditures for the year were only \$495,429,24, thus leaving un-expended \$354,570.76. The inspection of beef animals for export and interstate trade has been continued, and 12,944,036 head were in-spected during the year at a cost of 1% cents per head, against 4% cents for 1893. The amount of pork microscopically examined was 35,437,937 pounds, against 20,677,410 pounds in the preceding year. The cost of this inspec-tion has been diminished from 8% cents per head in 1893 to 6% cents in 1894. head in 1893 to 61/2 cents in 1894. Valuable Experiments.

The office of experiment stations, which is a part of the United States department of agriculture, has during the past year engaged itself almost wholly in preparing for publication works based upon the reports of agricultural experiment stations and other institutions for agricultural insular in the United tural experiment stations and other institutions for agricultural inquiry in the United
States and foreign countries. The accretary,
in his report for 1893, called attention to the
fact that the appropriations made for the support of the experiment stations throughout the
union were the only moneys taken out of the
national treasury by act of congress for
which no accounting to federal authorities was
required. Responding to his suggestion the
fifty-third congress, in making the appropriation for the department for the present iscal
year, provided that:

year, provided that:

"The secretary of agriculture shall prescribe the form of annual financial statement required by section 3, of said act of March 2, 1887; shall ascertain whether the expenditures under the appropriation hereby made are in accordance with the provisions of said act, and shall make report thereon to congress."

The best service of the statistician of the department of agriculture is the ascertainment, by diligence and care, of the actual and real conditions, favorable or unfavorable, of the farmers and farms of the country, and to such

ses which produce these conditions, to the and that the facts ascertained may guide their ntelligent treatment. In obedience end that the facts ascertained may guide their end that the facts ascertained may guide their intelligent treatment in obedience to this intelligent treatment of agriculture immelaw the department of agriculture immelaw the department forms of expense acdiately sent out blank forms of expense acdiately sent out blank forms of expense and intelligent to make through trusted experts, too to make through trusted experts, ions during the year, for the purpose of ions during the year of the several statute services. As a satisfactory report to congress, the boards of management of the several statute ions, with great alacrity and cordiality, ions, with great alacrity and cordiality, provides, with great alacrity and cordiality, tions, with great alacrity and cordiality, tions, with great alacrity and cordiality, have approved the amendment to the law produced that it will increase the efficiency of the stations and protect their directors and managers from loose tect their directors and managers from loose that the department of agriculture into closer and more confidential relations with the experimental stations, and through their joint service largely increasing the use-things to the agriculture of the country.

Acting upon a recommendation contained in the report of 1893, congress appropriated \$10.000

Acting upon a recommendation contained in the report of 1893, congress appropriated \$10,000 to enable the secretary of agriculture to in-restigate and report upon the nutritive value vestigate and release and commodities used for human food, with special suggestion of full, wholesome and edible rations less wasteful, and more economical, than those in common and more technical, that the technical the department has prepared and now has nearly ready for distribution an elementary discussion of the distribution an elementary discussion of the nutritive value and pecuniary economy of food. When we consider that fully one-half of all the money earned by the wage-earners of the civilized world is expended by them for food the importance and utility of such an investigation is apparent.

The department expended in the constant of the constant of

The department expended in the fiscal year 182, \$2,345,809.56, and out of that sum the total 182, \$2.345.809.56, and out of that sum the total amount expended in scientific research was 4.6 per cent. But in the year ending June 30, 184, out of a total expenditure of \$1.948.988.38, the department applied 51.8 per cent. of that sum to scientific work and investigation. It is, therefore, very plainly observable that the economies which have been practiced in the administration of the department have not been gratthe expense of scientific research. been at the expense of scientific research. An Agricultural Census.

A further important utility in agricultural statistics is found in their elucidation of the relation of the supply of farm products to the demand for them in the markets of the United States and of the world. It is deemed possible that an agricultural census may be taken each year through the agents of the statistical division of the department. Such a course is recommended for trial by the chief of that division. Its scope would be:

1. The area under each of the more impor-

? The aggregate products of each of such

3. The quantity of wheat and corn in the hands of farmers at a date after the spring sowings and plantings and before the begin-ning of harvest; and also the quantity of cotton and tobacco remaining in the hands of planters, either at the same date or at some other designated time.

Civil Service Reform.

The advantages to the public service of an adherence to the principles of civil service reform are constantly more apparent, and nothing is so encouraging to those in official life who honestly desire good government as the increasing appreciation by our people of these advantages.

To Protect Public Health.

I am entirely convinced that we ought not to their circulating notes whe belonger without a national board of health or principal or branch offices. ational health officer charged with no other futies than such as pertain to the protection of our country from the invasion of pestilence and disease. This would involve the estabishment, by such board or officer, of proper and counsel to local authorities on the subject. rompt advice and assistance to locate boards thealth or health officers in the suppression of contagious disease, and in cases where there are no such local boards or officers the immeflate direction by the national board or officer f measures of suppression, constant and auhentic information concerning the health f foreign countries and all parts of our own ountry as related to contagious diseases, and consideration of regulations to be enforced n foreign ports to prevent the introduction d contagion into our cities and the measures which should be adopted to secure their en-

The Labor Inquiry.

By virtue of a statute of the United States passed in 1888, I appointed, in July last. Hon. John D. Kernan, of the state of New York, and Hon. Nicholas E. Worthington, of the state of Illinois to form with Hon. Carroll D. Wright, ommissioner of labor, who was designated by said statute, a commission for the purpose of making careful inquiry into the causes of the controversies between certain rairoads and their employes which had resulted in an ex-tensive and destructive strike, accompanied by much violence and dangerous disturbance with considerable loss of life and great de-struction of property. The report of the com-missioners has been submitted to me and will be transmitted to the congress with the evidence taken up on their investigation. Their work has been well done, and their standing and intelligence give assurance that the report and suggestions they make are worthy of careful consideration.

Favors Free Coal and Iron.

The tariff act passed at the last session of the congress needs important amendments if it is to be executed effectively and with cer-tainty. In addition to such necessary amendments as will not change rates of duty, I am still very decidedly in favor of putting coal and fron upon the free list.

The Sugar Schedule.

So far as the sugar schedule is concerned. I fould be glad, under existing aggravations, to see every particle of differential duty in favor of refined sugar stricken out of our tariff law. If, with all the favor now accorded the sugar refining interests in our tariff laws, it still languishes to the extent of closing section. closing refineries, and thousands of discharged workmen, it would seem to present a hopeless case for reasonable legislative aid. An Argument for Free Ships.

With the advent of a new tariff policy not may calculated to relieve the consumers of our and in the cost of their daily life. but to inlite a better development of American thrift and create for us closer and more profitable commercial relations with the rest of the world, it follows as a logical and imperative essity that we should at once remove the thief if not the only obstacle which has so long prevented our participation in the foreign carrying trade of the sea. A tariff built upon the theory that it is well to check imports and that a home market should bound the industry and effort of the season and effort of American producers, was fitly supplemented by a refusal to allow American registry to vessels built abroad though owned and navigated by our people, thus exhibiting a willingness to abandon all contest for the advantages of American trans-oceanic tarriage. Our new tariff policy, built upon the theory that it is well to encourage such importations as our people heed, and that our products and manufactures should find markets in avery part of the habitshould find markets in every part of the habit-able globe, is consistently supplemented by the greatest possible liberty to our citizens in the ownership and navigation of ships in which our products and manufactures may be trans-ported.

The Issue of Bonds. During the last month the gold reserved in the treasury for the purpose of redeeming the lasts of the government circulating as money in the hands of the people became so reduced, and its further depletion in the near future seemed so certain that in the exercise of proper care for the public welfare it became seemed so certain that in the exercise of proper care for the public welfare it became accessary to replenish the reserve and thus maintain popular faith in the ability and determination of the government to meet, as agreed, its pecuniary obligations. It would have been well if in this emergency authority had existed to issue bonds of the government, bearing a low rate of interest and maturing within a short period, but the congress having failed to confer such authority, resert was necessarily had to the resumption act of 1875, and pursuant to its profisions bonds were issued drawing interest at the rate of 5 per cent. per annum, and maturing ten year. the rate of 5 per cent. per annum, and maturing ten years after their issue, that being the shortest time authorized by the act. I am glad to say, however, that on the sale of these bonds the premium received operated to reduce the rate of interest to be paid by the government to less than 3 per cent.

I cannot for a moment believe that any of car citizens are deliberately willing that their overnment should default in its pecuniary obligations of that its financial operations should be reduced to a silver basis. At any rate I should not feel that my duty was done if I

omitted any effort I could make to avert such a calamity.

Change in Currency System Advocated. The absolute divorcement of the government from the business of banking is the ideal relationship of the government to the circulation of the condition of the currency of the country. This condition cannot be immediately reached: but as a step in that direction, and as a means of securing a more elastic currency and obviating other objections to the present arrangement of bank more clastic currency and obviating other objections to the present arrangement of bank circulation, the secretary of the treasury presents in his report a scheme modifying present banking laws and providing for the issue of circulating notes by state banks free from taxation under certain limitations.

It is proposed to repeal all laws providing for

ation under certain limitations.

It is proposed to repeal all laws providing for the deposit of United States bonds as security for circulation: to permit national banks to issue circulating notes not exceeding in amount 75 per cent. of their paid up and unpaid capital, provided they deposit with the government, as a guarantee fund, in United States legal tender notes, including treasury notes of 1890, a sum equal in amount to 30 per notes of 1890, a sum equal in amount to 30 per cent. of the notes they desire to issue, this deposit to be maintained at all times, but whenever any bank retires any part of its circulation a proportional part of its guarantee fund shall be returned to it; to permit the secretary of the treasury to pre-pare and keep on hand ready for issue in case an increase in circulation is desired blank national bank notes for each bank having circulation, and to repeal the provisions of the present law impesing limitations and restrictions upon banks desiring to reduce or increase their circulation—thus permitting such increase or reduction within the limit of 75 per cent. of capital to be quickly made as emergencies In addition to the guarantee fund required.

it is proposed to provide a safety fund for the

immediate redemption of the circulating notes immediate redemption of the circulating notes of failed banks, by imposing a small annual tax, say one-half of 1 per cent., upon the average circulation of each bank until the fund amount to 5 per cent. of the total circulation outstanding. When a bank fails its guarantee fund is to be paid into this safety fund and its notes are to be redeemed safety fund and its notes are to-be redeemed in the first instance from such safety fund thus augmented-any impairment of such fund caused thereby to be made good from the immediately available cash assets of said bank, and if these should be insufficient such impairment to be made good by pro rata assessment among the other banks, their contributions constituting a first lieu upon the assets of failed bank in a first lien upon the assets of failed bank in favor of the contributing banks; as a further security it is contemplated that the existing condition fixing the individual liability of stockholders is to be retained and the bank's indebtedness on account of its circulating notes is to be made a first lien on all its assets. Another very important feature of this plan is the exemption of state banks from taxation by the United States in cases where it is shown to the satisfaction of the secretary of the treasury and comptroller of the currency by banks claiming such exemption that they have not had outstanding their circulating notes exceeding 75 per cent. of their paid-up and unimpaired capital; that their stockholders are individually liable for the redemption of their circulating notes to the full extent of their ownership of stock: that the liability of said banks upon their circulating notes constitutes under their state law a first lien upon their assets; that such banks have kept and maintained a guarantee fund in United States legal tender notes including treasury notes of 1890 equal to 30 per cent. of their outstanding circulating notes and that such banks have promptly redeemed

Conclusion. I conclude this communication, fully appreciating that the responsibility for all legislation affecting the people of the United States rests upon their representatives in the congress, and assuring them that, whether in accordance with recommendations I have made or not, I shall be glad to cooperate in perfect-ing any legislation that tends to the prosperity and welfare of our country.

their circulating notes when presented at their

GROVER CLEVELAND. Executive Mansion. December 3, 1894.

A LUCKY HUNT.

The Hunter Bagged a Precious Stone Instead of Game.

Precious stones are still numerous in certain districts of India, but the rajahs who own the property are jealous of all strangers, and resent all trespassing. Occasionally a fine gem is found by a sportsman or traveler. A party of English officers was out one day shooting on the estate of a petty chief, but bagged little game.

On the return from the hunt a young officer picked up a stone which lay in his path, and idly threw it against a rock. It broke into a dozen pieces, and out tumbled a beautiful, brilliant pebble. The Englishman picked it up, looked at it, and was about to throw it away, but changed his mind, and thrust it into his pocket, remarking as he did so:

"I'll keep this thing as a memento of my hunt at this beastly place, where I didn't shoot so much as a rat."

Arrived at Bombay, the officer dropped into a jeweler's store to have his watch repaired. While at the counter his hand came in contact with the pebble which he still carried in his pocket. He showed it to the jeweler and said: "Here's a nice stone I found. What'll you give me for it?"

The man looked at the stone, and, after examining it carefully, answered: "I'll give you one hundred rupees

Had the jeweler offered a shilling he might have been told to take the stone and keep the shilling, as the officer had not up to that time thought the find of any value; but the offer of one hundred rupees (about fifty dollars) awoke his suspicions that he had a fine diamond, and he responded with a laugh:

'I dare say you would give me that and a trifle more."

He did so, and sold his pebble in London for over three thousand pounds -Youth's Companion.

An Unenviable Position.

The ways of the schoolmaster in Montillana, province of Granada, Spain, are hard. The schoolhouse in this particular place is used as a granary during the summer vacation. A short time ago the schoolmaster wished to begin his instruction again mob of howling men, women and children gathered about the house of the mayor. This doughty ruler brought order out of chaos by-ordering two of his servants to chase the schoolmaster

things that are | WHEN WRITING TO ADVERTISERS PLEASE state that you saw the Advertisement in this

I have been telling some pretty big stories in your paper, not from any de sire to brag at all, but because I had an object in view. The object was to sti-up those farmers who needed it to improve their farming. Some of your readers are first-class farmers already and do not need any stirring up; to such I am not writing. But there are farmers who keep along about in the old rut, and seem to think that because the have always done things in a certain way it must be the best way. They ride by steam and send letters by fast mail and messages by telegraph, but stil farm it about as their fathers did in the days of stage coaches, only that they use a little more machinery. To such want to write two letters.

In this first letter I want to propose to you, brother farmers, that you take one lot on your farm, and begin on it now to the very best farming you possibly can. Keep an exact account with it, and see just what net profit it wil pay you. Charge for all seed and labor what it is worth, or what it cost you and charge for all manure put on, divid ing the cost fairly between each crop ir the rotation, and interest on the value of the land, and on the cost of all per manent improvements, such as under draining, clearing off stones, etc. Take one of your best lots, clear it of all ob structions, and underdrain every we spot. If it all needs drainining, drain it. Get the best tools in the market for thoroughly working and pulverizing the soil, and then use them without stint. Manure your land if it needs it, and de not forget to thoroughly pulvesize the manure. Put in the crops best suited to your locality. Select a good rotation the one best suited to your soil and crops. Do everything just when it ought to be done. Get the best of seed, and put the product of your land inte the nicest possible shape for market. It you do all this honestly and faithfully, I think you will be surprised, before you get around once with your rotation, at the profit of such farming. You will cal error is the conception that the art peace took thirty. A lawyer said about not go back to the old way after having once tried this kind of farming, nor will you need to be urged to try it on another

I am speaking of improvement in tillage, but but of course with this you want other improvements, such as improved breeds of cattle, sheep and swine to which to feed your products. If you have not the capital to do all this, sell a part of your land and get it. If you have two hundred or three hundred acres of land, and are "just about making a living," from it sell half and make more money with less worry from the other half. If you have but little land, and are in debt for that, why then you must start in a small way, but start all the same, and if you are faithful it will be the surest way to get out of dett. A correspondent (the one whose pigs ate the corn and then died, instead of letting him eat them-I am real sorry for him) asked in a late paper for word was first applied to Indianians my balance sheet. I suppose he wanted to find out how much money I could save. It is a very pertinent question, farmers for a hundred miles around as one can have a large income with little or no net profit.

' I can easily answer, as for the last three kept up in driving the swine-sounded years I have salted it nearly all down something like hoo-ie! hoo-ie!into one pile-a new house and furni- led to their being called, by a corrupture, which cost three thousand five tion of the sound, "Hoosiers." The story, hundred dollars. This was all saved, if true, would make the origin of the and some more, on a fifty-five-acre farm word comparatively recent, and it can wrote to her, and, though she had (thirty-five to thirty-six acres cultivat- not be accepted with credence for the ed, remainder pasture) in three years, reason that the palmy porkopoly days after living well and pay n; hired help of Madison were long after the Hoosiers well, and all other running expenses, had become known. repairs, taxes, some new tools, etc., etc.

Bonner, of Georgia, one of your corre- John Finley, the Wayne County poet, spondents, says: I am surprised to wrote a New Year's poem for the learn that you keep five horses on Journal entitled "A Hoosier's Nest," your little farm." I kept six work horses in which a description of the pioneer last year, and have the same number cabin in Indiana is given. The poem. now. And if my friend should happen in the light of one of the traditional around in the busy season, he would stories gives something of an idea of find three or four and prehaps five men the manner in which the word came at work in the field. Plenty of horses into use. The first few lines read: and plenty of help means thorough tillage, and work done when it ought to be-two very important points in farming. As to whether it pays to keep so many horses and and so much help on so small a farm, you may decide for yourself from the figures given above. Some farmers have tried spreading their work over a large area of land; if they have not been successful as they could wish, let them now try concentrating all their energies on a small area. Let your motto be, "more bushels to the nore - more cattle on less legs." Keep a much help, as many horses, make as much manure, but use them on fewer neres, systematically, and see if you do not clear more money. - T. B. Terry, in Coun'ry Gentleman.

-The people who believe that the English are the long-lost tribes of israel, are collecting money for what is known as the Tara Trust Fund, established not only to look after the lost tribes, but to excavate the Tara Mount, County Meath, Ireland, in the hope of discovering buried therein the deeds that were given to the Prophet Jeremiah when he purchased the land of Palestine. Mr. Spurgeon recently took this subject for his sermon, and declared that the fiction of the lost ten tribes has no warrant in Scripture. There were no tribes lost, hence there are no such persons yet to be discovered. Neither are we the descendants of those tribes. We are Gentiles, and the Jews to day are themselves the descendants of the tribes mentioned in holy writ. - Detroit Post:

The only time a man is willing to stay at hom and take care of the houe is when his wife wants him to go to prayer mounty and ner.

and Social

The first Napoleon's hatred of and ontempt for "idealogues" expressed in part the practical man's scorn for mere dreamers, but expressed far more the antagonism of brute force to that subtle ideal force with which it had to struggle in vain. For ideas have their own laws of growth, and as the tender shoot of some vegetable organism will upheave the heavy sod or split the hard new conception often defy the constraints of material compression. The days, or even into a densely peopled land, with its railways, cities and busy and said: commerce. Similiarly, an idea from "I've t empty of morals, may, in the course of time when scientific conceptions have a pig and beat their game." quite exceptional social potency, and politids. We believe that many of the mainder of the night. apparently quite remote from the sphere the assembled crowd: of politics. This idea may be shortly root of such political errors, they have ever hits it gets fifty cents.' sidered, in the first place, as develop-walked up until the pig man said that ments of the main political error any one person could guess as many sented to be "as good as another." from the family upward. But this im- actly 174 pounds! aginary reduction of one national, orwhich has increasingly invaded every branch of knowledge, to the profound this matter into consideration!" detriment of morals and religion .-

The first that is known of the word A letter before me from Mr. W. H. appearing in print was in 1830, when Sentinel.

I'm told in riding somewhere west A stranger found a "Hoosier's nest," In other words, a Buckeye cabin, Just big enough to hold Queen Mab in. Its situation-low but airy-Was on the borders of a prairie; And, fearing he might be benighted, He hailed the house and then alighted. The Hoosier met him at the door, Their salutations seon were o'er.

It was the custom among the early ioneers in Indiana in traveling through the country to hail a cabin by calling out: "Who lives lere?" and "Who's here?" About the time of the treaty of pence with the Incians, in 1818, and when the State was very sparsely settied, travel was attended by great dangers, and no man ever rode away from home without his rifle. As a common precaution of safety, when a traveler saw in the distance the smoke from a camp or cabin fire, he would call out, upon oming within hearing distance, "Who s here?" and from the response he would know if he was among friends. From a corruption of this form of salutation the people of Indiana were called Hooviers. Doubtless settlers, in writing back to friends at their old homes, would say that they twere among the Hoosiers," and in a few years the appellation sprang into general use. General W. H. H. Terrell, whose researches in the early history of Indiana have been thorough, and who may be accepted as authority, says that this is the true origin of the word, and Governor Wright is credited with saying that it was a corruption of the form of salutation of the early settlers of the Western country. A critical in-terpretation of Finley's poem seems to give proof of this explanation.—Indian-

#### The Men With the Pig.

A few days ago two men, who were afterwards found to be Detroiters, arrived in a town about fifty miles to the west of this, leading a pig. It was per-haps big enough and heavy enough to be called a hog, but they termed it a pig. and as they turned it over to the care of the landlord at whose inn they proposed' to rest for the night one of the men explained:

"Be awful careful with that pig. He's a daisy -a new breed just from Scotrock, so will the development of some land. We've sold him to a farmer out here for \$50, and we don't want any-

thing to happen to him." minute egg of the coral animal may The landlord locked the pig up and grow into an oceanic islet, or into a then began to think and cogitate and reef besides which ships may sail for suspect. When the strangers had gone to bed he called in some of the boys

-Ella Wheeler's marriage had its romance behind it. When the Army of the Cumberland held its reunion in Milwaukee, Mr. Robert M. Wilcox, a young manufacturer from Connecticut, was present. He had read Miss Wheeler's poetry and wished to see her. It happened that she contributed a poem to the occasion and was pointed out to Mr. Wilcox. On his return home he never met him, she liked his letter and replied. A pleasant correspondence followed, and soon a meeting was brought about. It proved a case of mutual love at first sight. - Milwaukee

-A missal or mass book printed in Antwerp in 1610 is in use at the chapel attached to Carmelwood, the priests' residence, near Upper Marlborough, Va. The type is clear and beautiful the paper still fresh and of the best texture, and the wood cuts, representing the various events in the life of Christ, are wonderfully choice and artistic. The book is supposed to have been brought over by some one of the early Catholic settlers in Maryland.
